

BOILER WATER TREATMENT**BOILER TREAT COMPLETE****FEATURES**

- Hydroxide / Phosphate Blend
- Contains oxygen scavengers to prevent corrosion
- Prevents scale formation
- Fluorescent dye helps detect leaks
- Ideal for hard water systems
- Controls pH
- Biodegradable

PROPERTIES

Appearance: Red liquid with no specific odor.

Boiling point: 230 °F

Specific gravity: 1.01 gr/cc

Non volatiles: 10-14 %

Solubility in water: Complete

Flash point: None

Storage stability: Keep away from direct sun light and open flames

pH of liquid: 13-14

Flammability: Non-flammable

Packaging: 5 gallon Pail
55 gallon Drum

BOILER TREAT COMPLETE is a complete formula that combines alkaline builders and carbonates to control the build up and incrustation of scale. It also contains oxygen scavengers and volatile amines to inhibit corrosion through the steam ways, protecting condensate plumbing. BOILER TREAT COMPLETE also contains hydroxide to stabilize the internal pH of the Boiler. The application dosage will depend on the percentage of condensate return, the replacement water and the cleanliness of the internal walls of the boiler. To complete treatment, it is necessary to perform a periodic lowdown to remove sludge and suspended solids, removing water twice per week. BOILER TREAT can be added as one shot or as a continuous additive. Refer to the label for in depth instructions and the attached SDS for precautions. The information contained in this safety sheet is aimed at creating a guide for the selection and use of the product. However, we are not responsible for any use not recommended by ChemTron.
